Sustainability is **SustainabITALY**

Green transition and innovation are also affecting airports, that are becoming smarter and more sustainable: airports are rethinking how their infrastructures could be designed and operated to reduce their overall environmental footprint and increase their positive economic impact.

Italian aviation and airport industry is working on the different dimensions of sustainability: economic, social, environmental, governance.

Italian companies, indeed, are involved in:

- qualified training and information programs on different sustainability topics performed by international experts;
- sustainability “assessments” using a tool financed by Horizon2020 funds and provided by the Enterprise Europe Network, a project supported by the EU Commission. The sustainability assessment produces a European benchmarking on current company performance followed by an action plan with suggested initiatives and steps aimed at strengthening the sustainable growth.
- sharing with the National Aviation Agencies (ENAC and ENAV) and the Italian Airports innovative solutions and models to afford jointly the sustainability challenge in the airports.

To support the efforts of the aviation sector in lowering its environmental impact, ITA - Italian Trade Agency is presenting the Italian exhibitors at Dubai Airport Show 2023 with the motto: Sustainability is SustainabITALY.

Italian Trade Agency - ITA

ITALIAN TRADE AGENCY

TRADE AND INVESTMENT

OPEN DOORS TO A WORLD
OF OPPORTUNITIES

ITA - Italian Trade Agency is the Governmental agency that supports the business development of our companies abroad and promotes the attraction of foreign investment in Italy. With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. Using the most modern multi-channel promotion and communication tools, it acts to assert the excellence of Made in Italy in the world.

FIND YOUR ITALIAN PARTNER

ITA - Italian Trade Agency supports the business development of Italian companies abroad, increases business opportunities, improves the image of 'Made in Italy', promotes industrial collaboration and foreign investment in Italy. Find your Italian partner is a business directory with virtual showcases of Made in Italy companies. We offer you an overview of Italian businesses, including company profiles, products images and details, website, business proposals and contact information. Foreign companies or agent interested in Italian products or looking for partnership with Italian companies, can access the database with the profiles, searchable by sector or product, and find a business partner.

Air Tech Italy

Air Tech Italy (ATI) is the leading Trade Association representing Italian companies specialized in supplying products, technologies and services for airports, civil aviation authorities and air navigation service providers. The organization is the first point of contact for international clients looking for top-quality Italian companies. The main goal of the Association is to support airport operators, civil aviation organizations and air traffic service providers with the right solutions “Made in Italy” to cover their aviation needs.

The organization was founded in July 2020 under the institutional patronage of ENAC (Italian Civil Aviation Authority) to bring together leading Italian suppliers of solutions for the aviation industry in one strong organization.

Internationalization, Digitalization, Innovation and Sustainability are the main drivers of ATI members.

ATI supports its Members in networking and establishing collaborative relationships, providing them with practical assistance for business intelligence, business meetings, participation in business missions and international trade fairs.

CIAS ELETTRONICA SRL

CIAS is an Italian manufacturer of evolved Perimeter Intrusion Detection Systems with Fuzzy Logic analysis. Our Microwave barriers, immune to Radio Frequency Interference normally present in airport environments, and MEMS fence-mounted systems are installed worldwide for perimeter protection of major airports and for correct management of the taxiways, preventing aircraft collisions especially when the weather conditions are decreasing the visibility from the control tower. We also developed a turnkey mobile System for defence of temporary aircraft parking. Our solutions are IP&PoE ready and cybersecurity compliant.

ENTER MED SRL

EnterMed provides HEELP System aimed to manage properly airport emergency and contingencies.

Currently working in over 25 Airport of Europe and Middle East, HEELP – Handling Easy Emergency and Local Procedure – runs on more levels of coordination:

- Early Warning - Early recognition of the event. If a potential risk is addressed in the initial phase, it is possible to activate proper mitigation procedures.
- Emergency Notification - When the event occurs and it's in progress, it is essential the prompt notification and safe sharing of available information to all departments involved in the emergency plan.
- Crisis Management - An unexpected event can potentially affect the whole company business. HEELP system, proposes adequate check-list on crisis management, in compliance with company regulations and legal requirements.
- Disaster Recovery - Recovering of normal operating conditions is essential for safeguarding the business. The HEELP system manages urgent recovery procedures, according to pre-coded recovery plans.

ewo

When illuminating large areas, performance, durability, and efficiency are key. The objective of illumination is to ensure precision, homogeneity, and 0% light pollution.

ewo's portfolio of high-power floodlights with modular features meets all requirements and demands at airports, ports, traffic routes, logistics areas, sports facilities, and even sports stadiums.

Additionally, ewo's LightLogger hardware and software for light measurements is a great addition for planners, as an easy-to-operate mobile light measurement device, for any large area.

Our main novelties are:

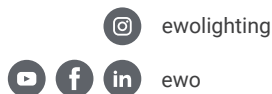

- Upgrade of the R-System gen3 R1 floodlight up to 60.000 lm with multiple control solutions (DALI, RDMDMX) and new additions in our lenses range.
- Our R-System product family will upgrade its performances featuring a higher lumen output (around 150.000 lm for R2), versatile mounting and control options (DALI, RDM/DMX) to meet all requirements and demands at airports.

FAAC SPA - HUB PARKING TECHNOLOGY

HUB Parking Technology is the FAAC Technologies brand that develops smart software, and mobile solutions for the parking and mobility industry, manufactures and installs PARC Systems and provides pre- and after-sales services.

A key value of HUB is innovation: not only in the technology, products and services, but also in developing new approaches to entrenched business practices. Our goal is to make parking effortless for users as well as profitable and easy to manage for operators, through efficient systems that protect their investment.

HUB's product range Jupiter is scalable and modular, in terms of equipment and 3rd party integrations alike: multiple ticketless options and media types, including LPR, AVI, Proximity, and "Wave For Ticket" touchless access are ready to modernize your car park at a glance.

FIBREFENCE

FibreFENCE is the range of fences and gates for the airport sector designed and manufactured by Fibre Net Spa that, thanks to the distinctive radio-transparency and frangibility of FRP (Fiber Reinforced Polymer), unlike traditional materials, guarantees the absence of interference with ILS and Radar devices and limits damage in the event of aircraft impact, greatly improving flight safety.

Fibre Net Spa was founded in 2000 in Udine (Italy), soon becoming a worldwide leader in the design and manufacturing of ground-breaking FRP composite products, mainly used in the construction and in different industry sectors.

Exploiting this extensive experience and knowledge, Fibre Net developed FibreFENCE: thanks to the exclusive production technology and construction design, FibreFENCE fencing systems ensure full compliance with ICAO standards in terms of security and airport infrastructure design, keeping initial investment very low and reducing maintenance nearly to zero.

FIVES

Fives customizes Baggage Handling Systems and provides advanced technologies to fully automate airport logistics by integrating circular cross-belt sorters, conveyors and carousels to transport luggage from check-in, HBS and EBS to final sortation and reclaiming.

Our state-of-the-art software allows low-level and high-level control and monitoring and offers maximum reliability, safety and maintainability.

Our BHS solutions are designed to operate 24/7, 365 days a year and comply with IEC/EN safety regulations

From system design to installation and final commissioning, Fives assists you at every stage of the project execution, as well as throughout the whole life-cycle of the solution thanks to customized services.

Our service offer includes upgrades and modernizations to keep the installation at its best level of performance.

Our solutions adapt to your changing needs and help you face several challenges:

- Guarantee bags security screening and traceability
- Increase productivity and flexibility
- Maximize performance
- Reduce carbon footprint
- Improve passenger satisfaction

GENERAL SECURITY ITALY

ForteSecurGroup was founded in 2004 by Salvatore Forte, former Colonel of the Carabinieri armed force, and currently Security Manager of large companies and airlines.

The HQ and offices are based in the North of Italy, where we have 240 employees and €10 mil. annual revenue. FSG started as a company specialized in security training and today we are the only European player providing integrated security projects exclusively for large companies.

Our business units:

- Consulting and Training Academy
- Security service guards
- Technological security system
- Security Operation Center

ForteSecurGroup is one of the few organizations certified by ENAC (Italian Aviation Authority), qualified for aviation security training and has received many awards.

Our Tech Department recently developed the Security&Safety HyperView Project which aims to control and manage the flow of people in airport spaces while guaranteeing social distance analysis in real time, thanks to an innovative Artificial Intelligence-based software.

JM ENTERPRISE

JM Enterprise SRL, is an Italian-based company specialized in the design, construction, refurbishment, and servicing of road tankers, aircraft refuellers, fuel hydrant dispensers, and other fuelling equipment as well as semi-mobile airport fuelling infrastructure for the industrial and civil & defense aviation industry.

It offers custom-made and sustainable solutions including the development of electrically driven aircraft refueling vehicles based on state-of-the-art technologies. JM is amongst the rare tank vessel manufacturers that not only offers traditional solutions with aluminum alloy but also more advanced and sustainable solutions in stainless steel, thanks to the use of its – in-house developed - vessel engineering method.

JM is holding UNI EN ISO 9001:2015 and UNI EN ISO 14001:2015 certificates. Regular design optimizations during the 50 years of experience built-up enhanced trouble-free use of equipment, which makes this equipment the preferred choice of many fuel-into-plane operators and technicians.

LUXSOLAR

LUXSOLAR is a brand of C&E GROUP.

Its story began 20 years ago with the production of Ex Aircraft Warning Lights. The experience in hazardous environments, where maintenance is a critical issue, brought LUXSOLAR to exploit the potential of LED features to increase AWL performance and life.

The choice to use LEDs, combined with high-tech optics and a patented cooling system, turned out to be the key to success of LUXSOLAR products. Now the brand represents a wide range of AWL and Lighting solutions for applications to airfields, heliports, helidecks, Ex and marine environment and even more innovative products are at development stage.

LUXSOLAR supports customers in the choice of the proper Lights configuration according to international standards. LUXSOLAR aeronautical beacons and obstruction lights are installed in 100 airports all around the world and an upcoming project concerns the supply of new generation IDENTIFICATION and AERODOME lamps for Milano Linate airport.

MOBIMESH INPIAZZA

inPiazza is the innovative AI-powered Location Analytics and Marketing Automation platform to drive passenger journeys.

By exploiting Video, WiFi and BLE sensors, inPiazza gathers data to study the passenger flow, and provides digital and location-driven touch points to engage passengers and to communicate with them.

inPiazza WiFi Engagement is the perfect onboarding tool to engage passengers in a frictionless airport experience and to provide commercial and travel information in the right place and at the right time.

Profiled messages and customer satisfaction surveys can be conveyed through conversational channels (i.e. WhatsApp), and push notifications, with the highest conversion rate.

Airport services, such as fast track and parking, can be proposed to the passengers when most needed, and also emergency information can be provided to passengers.

inPiazza perfectly fits in the omnichannel strategy of the airport, thus creating the ultimate passenger phygital experience.

OCEM AIRFIELD

OCEM Airfield is a global leader in solutions that help airports handle safely and efficiently more aircrafts from approach to departure.

Backed by a century of expertise in the airfield industry, OCEM Airfield focuses on the design, development, and production of the widest range of airfield ground lighting solutions.

The company is the preferred airfield partner to well over 1,500 airports on all continents.

The Connected Airport is our innovative vision for airports that entails delivering a true end-to-end approach by re-uniting and connecting all key airside components and delivering the highest degree of efficiency, sustainability, and safety.

Guided by this vision, our products, systems and services further improve an airport's performance from approach, runway, taxiway lighting and power to tower-based traffic control systems and services.

At the Dubai Airport Show OCEM Airfield will introduce its latest web based Airfield Control and Management System and showcase its latest Airfield Ground Lighting Innovations.

SEINGIM

SEINGIM began its activities 25 years ago in Venice. Today is one of the most relevant Italian multidisciplinary engineering and consulting firms, and it has 15 offices in the Italian territory and a branch in Kazakhstan.

The team is composed by more than 400 engineers, designers, architects, technicians and project managers and it's driven by a common purpose to deliver top engineering services for a better and sustainable world.

Technical capabilities for 2023 are 945.000 engineering hours.

Company main markets are: buildings and infrastructures, oil & gas, industrial plants, power plants, energy efficiency and renewables.

The developed activities span from concept selection, concept definition, execution and construction projects, to support activities in field during commissioning and starting phases, related to multiple engineering services:

- Electrical Engineering
- Fire Prevention Engineering
- Plumbing & HVAC Engineering
- Instrumental and Automation Engineering
- Mechanical and Piping Engineering
- Process Engineering
- Environmental Engineering (Energy Efficiency and Saving, both in buildings and in productive cycles).

For over 30 years Softech has been supplying systems for monitoring the airport environment.

Our product portfolio includes systems for ENVIRONMENTAL MONITORING (noise, air quality, weather, indoor parameters, etc.), FLEET and GSE MANAGEMENT (location and monitoring of CO2 emissions with diversified technologies according to need), management of AIRCRAFT GROUND MOVEMENTS (ADS-B technology) and SMART AIRPORT - IoT solutions.

We offer turnkey solutions complete with hardware, equipment, software and professional services performed by highly qualified specialists: environmental studies, consultancy, system design, installation, maintenance are just a few examples.

All of our systems support third-party equipment, can be customized as needed, and integrated with our community engagement solutions.

With a growing international presence and a strong value proposition also confirmed by our ISO 9001, 14001, 27001 certifications, we are the right partner for your airport!
